FABGRID®

Strength in ONE Step

Research Partner with Texas A&M

Upgrade your next project with the efficiency of BaseLok® FabGrid®. By pairing a high-quality geogrid with a non-woven geotextile fabric through unique thermal lamination, we've turned a complex two-step process into a single, high-performance solution.

WHY CHOOSE THE ONE-STEP PROCESS?

Deploying BaseLok® FabGrid® eliminates the headaches of traditional multi-layer installations.

- **Faster & Simpler Installation:** Use a single roll and single placement to reduce labor time and equipment costs.
- **Superior Bonding:** Factory-controlled thermal bonding prevents layers from shifting or sliding during compaction.
- **Enhanced Load Transfer:** Stresses transfer more efficiently from the aggregate through the geotextile directly into the geogrid.
- **Research-Proven Performance:** Texas A&M University research shows FabGrid® outperforms separate layers, significantly reducing rut depth.
- **Lower Total Cost:** While material costs may differ, you save money through reduced labor, faster timelines, and improved long-term pavement life.

THE RISKS OF THE TWO-STEP METHOD

Installing geogrids and geotextiles separately introduces unnecessary risks to your project's integrity.

THE PROBLEM

Layer Separation

Construction Damage

Complexity

Indirect Costs

THE CONSEQUENCE

Aggregate can work its way between layers, causing the geogrid to rise toward the surface.

Geotextiles are often torn or snagged while placing a separate geogrid.

Managing two sets of overlaps, two anchoring systems, and two products to inspect increases the chance of error.

Double the labor and anchoring devices often lead to higher lifecycle costs and excessive waste.

IDEAL APPLICATIONS

- Roadways
- Renewable Energy
- Data Centers
- Electrical Distribution
- Petrochemical
- Industrial Railways
- Port / Intermodal Facilities
- Oil & Gas
- Government Infrastructure
- Commercial / Residential
- Coastal / Marine Waterways
- Waste Management
- Military
- Mining
- Federal EPA Hazmat
- Heavy Haul Roads
- Road Base Stabilization
- Airports

BUILT FOR LONGEVITY: Improve your bearing capacity, rut resistance, and overall safety with a single application.
